

Be the answer.

The full go-to-market plan: positioning, north stars, the hooks and formats that work in 2026, the acquisition engine, paid ads, email nurture and voice. Built for a founder-led team with a \$2,000/month budget aiming at 1,000 paying customers.

01 · Positioning

The thesis

**Google gives ten links.
AI gives one answer.
Alphaa makes sure you're in it.**

One sentence everyone on the team can repeat. Every post, ad and email ladders up to it.

The category we own

"**AI agent for AI search.**" Not an SEO tool, not a GEO dashboard, not an agency. Tools ask owners to do work; agencies send PDFs. We're the third thing: an agent that checks what AI says, does the fix, and asks you to tap approve.

The enemy

Not competitors. The enemy is **invisibility**: the customer who asked ChatGPT, got three names, and never knew you existed. The secondary enemy is **the \$2,000 agency PDF** that optimizes for a page of links fewer people look at.

Why we win

Proof in 60 seconds

The free check is the demo

Live answers from four AIs about their own business. No competitor shows the problem this fast.

Agent, not app

It does the work

Writes, fixes, publishes. The owner taps approve. Zero learning curve.

Price shock

\$99 vs ~\$2,000

Month to month. Cancel in two clicks. A 90-day guarantee.

Honesty

We don't promise #1

In a category full of snake oil, the straight talker wins trust.

02 · What we optimize

North stars

One number per layer. If an activity doesn't move one of these, we stop doing it.

LAYER	NORTH STAR	WHY THIS ONE
Company	Paying customers (goal: 1,000 by Dec 31)	Revenue truth. Everything else is a leading indicator.
Marketing	Free AI checks completed per week	The check is where people feel the problem. More checks → more customers, almost mechanically.
Conversion	Check → paid within 14 days	Tells us if the result moment, nurture and offer are doing their job.
Content	Saves + shares + "check yours" clicks per post	Likes are vanity. Saves and shares mean value; clicks mean intent.
Brand	Times AI names Alphaa for "AI visibility" questions	We sell being recommended by AI. We must be recommended by AI. The daily content engine feeds this.

Targets are ours to set and tune weekly. Start with a baseline in week 1–2, then commit to week-over-week growth on checks completed.

What users actually want

Owners don't want "AI visibility." They want the phone to ring, without learning anything new, from someone who won't rip them off.

THEY WANT	WHAT THEY SAY	HOW WE ANSWER
To know	"Does ChatGPT even know we exist?"	Free check: the real answer, in 60 seconds.
To win	"Why does AI recommend the place down the street?"	We show who got named and what they have that you don't.
To not do work	"I don't have time to learn another tool."	Your agent does it. You tap approve.
To not get burned	"My last agency locked me in for a year."	\$99, month to month, cancel in two clicks, 90-day guarantee.
To see proof	"Show me it's working."	Weekly briefing: what changed, in plain English.
To look smart	"I want to be ahead of this AI thing."	Give them the language to tell their peers. Shareable wins.

The emotional engine

- **Fear:** becoming invisible without noticing. (Strongest trigger.)
- **Envy:** a competitor getting named. (Fastest trigger.)
- **Distrust:** agencies and AI hype. (We turn it into trust by being straight.)
- **Relief:** "someone's handling it." (What they actually pay for.)

Hooks that work in 2026

Feeds are flooded with polished AI-generated content, so polish no longer stops the scroll. What stops it is **specific, personal, provable**: a real screen, a real question, the viewer's own situation. Seven hook families, each with a template.

1 · The self-test

"Open ChatGPT. Type 'best [your trade] in [your city]'. Are you in the answer?"

Turns a scroll into an action. The viewer runs the experiment and feels the problem themselves.

2 · Screen-proof

"I asked ChatGPT for a dentist in Austin. Watch who it picked."

A live screen recording of a real AI answer beats any claim. Real, unedited, on a phone.

3 · The contrarian truth

"Your SEO agency is optimizing for a page fewer of your customers ever see."

Picks a fight with something owners already resent. Variants: "SEO isn't dead. It just isn't where your customers are anymore."

4 · The lost customer

"A customer asked ChatGPT who to call this morning. It named your competitor."

Leads with the outcome we sell: customers from AI. Price never leads a hook; agency-fee math makes us look like a cheaper SEO agency. Keep \$99 vs ~\$2,000 for body copy, offer posts and retargeting.

5 · The agent diary

"My AI agent found out ChatGPT thinks we close at 5. We close at 8."

First-person, small and specific. Shows the product without selling it. Label it as an example when it is one.

6 · The insider secret

"3 things ChatGPT checks before it recommends a local business."

Save-bait. Gives real value and makes us the authority.

7 · The callout

"Plumbers: this one question decides if AI sends you jobs."

Industry name in the first word. Narrow beats broad: the right person stops; everyone else scrolls on, which is fine.

Hooks to retire

- "AI is changing everything..." (everyone says it; nobody stops)
- Agency-fee or "what does your SEO guy do" hooks (they put us in the SEO category)
- "Did you know...?" and other quiz openers
- Stock-photo or obviously AI-generated imagery
- Any claim we can't show on screen

04b · Ready to post

Copy you can use today

ANGLE	COPY	BEST ON
Competitor check	I asked ChatGPT for a dentist in Austin. It named three. Is your practice one of them? Check what AI says about you, free: alphaa.app/start	Meta ads, X
Lost customer	A customer asked ChatGPT who to call today. It named three businesses. Make sure yours is next. See what AI says about you, free: alphaa.app/start	LinkedIn, Meta ads
One answer	Google gives 10 links. ChatGPT gives 1 answer. If you're not in it, that customer never knew you existed.	Shorts, Reels, X
Fact fix	AI told a customer you close at 5. You close at 8. Here's how to fix what AI gets wrong, without touching code.	LinkedIn, Meta ads
Agent POV	I asked ChatGPT about you this morning. Here's what it said, and here's what I'll fix. You just tap approve.	Reels, TikTok

The Austin dentist line is an example scenario. Swap in a real check you ran before posting, and keep the screen recording.

05 · Formats

Posts that work in 2026

Platforms now reward watch time, saves, shares and DMs over likes. The formats below earn those signals, ranked by expected return for us.

FORMAT	WHAT IT LOOKS LIKE	WHERE
Live AI check	20–40s vertical screen recording: ask an AI a local question, react to the answer, show the fix. Captions burned in.	TikTok, Reels, Shorts, LinkedIn video
Founder talking head	Varun to camera, phone-shot, 30–60s, one idea. Imperfect is fine; real beats produced.	LinkedIn, Reels, TikTok
Document carousel	6–9 black & white slides: a checklist or "how AI picks" breakdown. Built to be saved.	LinkedIn (PDF), Instagram
Text-first opinion post	Strong first line, short lines, one lesson, a question at the end.	LinkedIn (personal profile)
Chat-bubble image	One image of an AI conversation with a 4–5 word headline.	All, and the best ad creative
Comment-to-get	"Comment CHECK and I'll send you the 3 things AI looks for." Auto-DM delivers it plus the check link.	Instagram, LinkedIn
Long-form audit	8–15 min "We asked 4 AIs about 10 HVAC companies in Denver" breakdown. Industry-level, no shaming.	YouTube (feeds AI answers too)

Recurring series (people follow series, not posts)

- **"Are you in the answer?"** One industry and city per episode. The flagship series.
- **"Agent diary"** What the agent did this week, from its point of view.
- **"SEO said / AI says"** Myth-busting, side-by-side.
- **"60-second fix"** One thing an owner can fix today, with or without us.
- **"Building Alphaa"** Founder build-in-public: what we shipped, what broke, numbers.

06 · The system

Content strategy

Pillars and mix

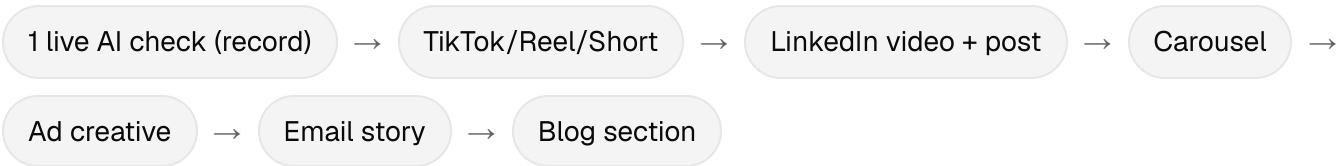

PILLAR	SHARE	JOB
Proof	40%	Live AI checks, screen recordings, real answers. Makes the problem undeniable.

PILLAR	SHARE	JOB
Teach	25%	How AI picks businesses. Checklists, myths, 60-second fixes. Builds authority.
Agent	15%	Product in action: agent diary, approve-with-one-tap moments.
Founder	10%	Build in public. Trust comes from a face.
Offer	10%	Direct CTA: free check, \$99, guarantee.

Weekly cadence (founder-sized)

CHANNEL	CADENCE	NOTES
LinkedIn (Varun)	5 posts/week	The main organic channel. Personal profile outperforms the company page; the page reshares.
TikTok + Reels + Shorts	4–5 videos/week	Record once, post everywhere. Batch on one day.
Instagram feed	2 carousels/week	Save-worthy. Plus stories that reshare videos.
Facebook page + groups	2 posts/week + group answers	Trades and dental owner groups: answer questions, never pitch. Link only when asked.
X	1–2 posts/day	Short takes and screenshots of real AI answers. Where marketers, founders and AI watchers argue about GEO. Good for the SaaS segment and press.
Reddit	3 helpful comments/week	r/smallbusiness, r/HVAC, r/Dentistry, r/LawFirm. Reddit is heavily cited by AI answers.
YouTube long-form	2/month	Industry audits. Evergreen and cited by AI.
Blog	3/day (automated)	The content engine already runs daily. Repurpose the best into posts.

The repurposing chain

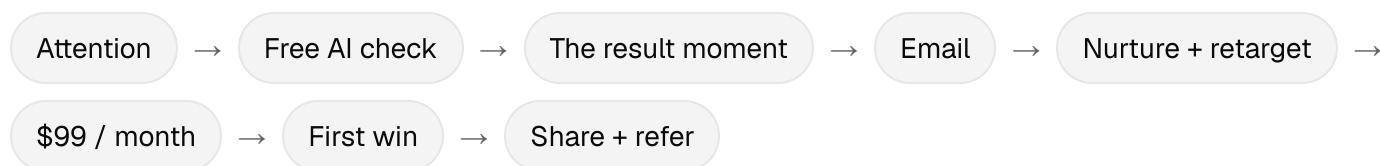

One recording a day feeds every channel. Batch: record 5 on Monday, cut on Tuesday, schedule for the week.

The dogfood story (our best content asset)

Run Alphaa on alphaa.app publicly. Post the baseline ("ChatGPT doesn't name us yet for 'AI visibility tools'"), then every change as it happens. It's proof, a series and a founder story at once, and it only works if we report it truthfully, including the weeks nothing moves.

07 · Funnel

The acquisition engine

Everything points at one door: **alphaa.app/start**. The result moment ("ChatGPT named three businesses. You weren't one.") is our best salesperson. Protect it, test it, make it screenshot-able.

Channels, ranked for us

1. **Meta ads** → **free check**. Owners live on Facebook and Instagram. Cheapest path to volume.
2. **Google search ads**. High intent: "seo agency alternative", "how to show up on chatgpt", "ai seo for [trade]".
3. **Founder-led LinkedIn**. Free, compounding, and where lawyers and multi-location owners are.
4. **Short video (organic)**. Lottery-ticket reach; one hit can deliver weeks of checks.
5. **Partnerships**. Web designers and small agencies who build sites for local businesses: they refer, we pay recurring commission. Also vertical newsletters, associations, chambers.
6. **Product-led loops**. Customers share their "ChatGPT now names us" win (share pages already exist). Ask for a referral right after the first win.
7. **AI search itself**. The daily blog engine and YouTube audits so AI names Alphaa when owners ask about this problem.

Outbound (light, targeted)

Run the check on a prospect's business first, then send them their own result: "I asked ChatGPT about you. Here's what it said." Personal, relevant, 3 sentences. Use the separate outreach domain (tryalphaa.com) once warmed, never alphaa.app.

08 · Paid

Paid ads

Rule one: creative is the targeting. On Meta in 2026, broad audiences plus a strong creative beat narrow interest stacks. Our job is to ship new creative every week and let the algorithm find the owner.

CHANNEL	BUDGET	SETUP
Meta prospecting	~\$700/mo	Broad US + Canada, 30–65. Optimize for completed checks. 3–5 new creatives a week; kill losers at 3 days.
Meta retargeting	~\$300/mo	People who started but didn't finish a check, and checkers who didn't buy. Show the guarantee and the agent at work.
Google search	~\$800/mo	Exact and phrase match on intent terms. Send to /start or the matching /for/[industry] page.
Test budget	~\$200/mo	TikTok Spark Ads boosting organic winners; YouTube in-stream later.

Ad creative that should win

- **The phone-screen demo:** someone types "best dentist near me" into ChatGPT; the answer appears; overlay "Is your practice here?" CTA: Check yours free.
- **The founder ad:** Varun, 20 seconds, "I built an AI agent because..." Founder ads earn trust on cold traffic.
- **The split screen:** left, a cluttered Google results page; right, ChatGPT's single answer with three names. Overlay: "Which one are your customers using?" Great as a Short or Reel.
- **The offer card (retargeting only):** black card, white type, "\$99 a month. Month to month." plus the guarantee. Never a cold-traffic hook.
- **The callout:** "HVAC owners:" + the self-test. One version per top industry.

- **UGC-style:** once real customers exist, their own phone clip of "ChatGPT named us." Never fake this.

Measure cost per completed check and check → paid, not cost per click. Kill rule: a creative with a weak thumb-stop (3-second view) rate after ~\$30 spend is off.

09 · Nurture

Email nurture

Most people who run the check won't buy that day. Email turns the result moment into a 14-day conversation. Write it from the agent, in plain text, short.

Live: one-click unsubscribe, mailing address in every footer, consent line at the email field (CAN-SPAM and CASL).

Scan-lead sequence (live): daily burst, then weekly

Most buyers decide in the first few days, so Days 1 to 4 send daily, then once a week until Day 60. From ai-agent@alphaa.app, replies to hi@alphaa.app.

DAY	SUBJECT	JOB
0	What ChatGPT said about {business}	Deliver the report.
1	Why AI named {rival} instead	Show the gap: who got named and what they have.
2	I already drafted your fix	Show the FAQ draft the agent wrote.
3	Can anyone guarantee ChatGPT?	Honesty email: 90-day guarantee + 7-day refund.
4	What \$99 a month does for {name}	The offer, itemised. Agency comparison only as the last line.
11	AI answers change. Has yours?	Re-check.
18	3 things AI checks before it names a business	Teach.
25	Ask ChatGPT why it picked them	A test they run themselves.
32	When AI gets your hours wrong	Fact fix (labelled example).

DAY	SUBJECT	JOB
39	Reviews AI can actually read	Teach.
46	One page per service	Teach.
53	Put the answer in the first sentence	Teach.
60	Should I stop checking for {name}?	Final break-up email.

Behaviour triggers

- Visited pricing but didn't buy → same-day "questions?" email from Varun.
- Started checkout but didn't finish → 1 hour later, the guarantee + 7-day refund.
- Ran a second check → they're interested; send the agent-diary story.

Customer emails (already partly live)

- **Weekly briefing:** what changed, what the agent did, what needs approval. Example tone: "I asked ChatGPT about you today. I fixed your hours and drafted three review replies. Two need your OK." Visible weekly work is what keeps people who left agencies over opaque reporting.
- **First-win alert:** "Perplexity named you today." With a share button.
- **Referral ask:** sent only after a first win, never before.

10 · Voice

Tone and brand

The calm operator. Sounds like a sharp friend who already did the homework: plain, confident, a little dry, never hypey.

Plain

Say it like a customer would

"Show up when people ask AI," not "GEO-optimized entity signals."

Proof over promise

Show the screen

If we can't show it, we don't say it.

Agent voice

First person, specific

"I asked ChatGPT about you this morning."

Short

One idea per line

Built to be read in 2 seconds.

SAY	NOT
Your agent does the work. You tap approve.	Our AI-powered platform automates optimization.
Get recommended by AI.	Dominate AI search rankings.
See what ChatGPT says about you.	Unlock your AI visibility score.
Nobody can promise #1. Here's what moves it.	Guaranteed #1 on ChatGPT.

Visual identity

- Black and white only. Pure black, white type, grey secondary text.
- Phone frames and chat bubbles of real AI answers: the visual signature.
- One image, a 4–5 word headline, readable on a phone in 2 seconds.
- Real faces (Varun, later customers) over stock or AI-generated people.

11 · Sequence

90-day roadmap

Days 1–30 · Foundations and hook testing

- Lock handles and profiles as Alphaa AI Agent everywhere; black and white.
- Build email unsubscribe + consent, then switch on the scan-lead sequence.
- Pixel/conversion events firing on check started, check completed, purchase.
- Post daily on LinkedIn and short video; test 20+ hooks organically.
- Launch Meta + Google with the top 5 organic hooks as ads.
- Start the public dogfood series on alphaa.app.

Days 31–60 · Double down

- Move budget to the 2–3 winning creatives; keep shipping 3 new per week.

- Launch the "Are you in the answer?" series for the top 3 industries.
- Recruit the first 10 web-designer partners.
- Comment-to-get automation live on Instagram and LinkedIn.

Days 61–90 · Proof and loops

- First real customer wins become content (with permission) and UGC ads.
- Referral ask after first win; share pages promoted.
- YouTube industry audits; pitch vertical newsletters and podcasts.
- Cut every channel that isn't producing checks at a sane cost.

12 · Every Monday

The weekly scorecard

METRIC	TELLS US	ACTION IF WEAK
Checks completed	Top-of-funnel health	More hooks, more creative, more posts
Cost per check	Ad efficiency	New creative before new audiences
Check → email	Result-moment strength	Test the result screen and email ask
Check → paid (14 days)	Offer + nurture	Tune the sequence, guarantee placement
CAC	Unit economics (target ≤ \$300)	Shift spend to the cheapest channel
Saves + shares / post	Content value	More "teach" and checklists
3-second view rate	Hook strength	Rewrite the first line, not the video
AI mentions of Alphaa	Our own AI visibility	Feed the content engine the missing topics

13 · Non-negotiable

Guardrails

- **Never fake proof.** No invented customers, results, testimonials or counts. Example scenarios are labelled as examples. This is the fastest way to lose the honesty edge.
- **No "#1", no promised rankings.** We promise the work and the guarantee, not the outcome.
- **Four AIs, named exactly:** ChatGPT, Gemini, Claude, Perplexity.
- **Don't shame named small businesses** in public audits. Show industry patterns, blur names.
- **Email law first:** unsubscribe and consent before any marketing email to non-customers.
- **Plain language beats legal language** in posts ("tap approve"), as long as it stays true.
